Summary

Full-Stack Developer with hands-on experience shipping features on a production SaaS platform, plus five independent full-stack projects, now focused on building DevOps and cloud infrastructure skills. Comfortable with Linux system administration, Git workflows, Docker containerization, and CI/CD pipelines, alongside a strong backend foundation in Node.js/TypeScript, PostgreSQL, Redis, and REST API design. Actively building infrastructure-as-code and deployment automation projects using Docker, GitHub Actions, Terraform, and Kubernetes.

Technical Skills

- **Systems & DevOps:** Linux (administration, permissions, process/service management), Git, Docker, GitHub Actions, CI/CD, Bash Scripting, Kubernetes, Terraform, AWS & Azure Fundamentals
- **Backend:** Node.js, Express.js, FastAPI, TSOA, REST APIs, MVC Architecture
- **Databases & Caching:** PostgreSQL, MongoDB, MySQL, Redis, Prisma, TypeORM
- **Real-Time & Async Systems:** Socket.IO, Redis Pub/Sub, BullMQ, Cron Jobs, Background Job Processing
- **Frontend:** React.js, Next.js, TanStack Router, TanStack Query, Tailwind CSS, HTML5, CSS3
- **Authentication & Security:** OAuth 2.0, JWT, TOTP 2FA, RBAC, Clerk, Zod
- **Languages:** TypeScript, JavaScript, Python, PHP, SQL
- **AI / ML:** Google Gemini API, LLM Integration, NumPy, Pandas, Matplotlib, Seaborn, scikit-learn

Experience

Full-Stack Developer Intern, Stradmont Solutions

July 2026 – September 2026

Builderbase (production SaaS platform)

Bhaktapur, Nepal

- Contributed backend services, database models, and REST APIs to Builderbase, a production SaaS platform, using Node.js, TypeORM, and PostgreSQL, alongside React/TypeScript dashboard features.
- Worked with **Git, Linux, and Docker** in a CI/CD-oriented deployment workflow, supporting day-to-day development and staging environment tasks.
- Implemented role-based access control and organization hierarchy using rank relationships and closure-table tree structures.
- Built real-time notifications with the Outbox Pattern, Redis Pub/Sub, and Socket.IO, powering live notifications, badge updates, and toast alerts.
- Implemented cron-based scheduled jobs with Redis and BullMQ for licensing reminders, onboarding reminders, and CRM notification workflows.
- Built reusable frontend components and dashboard features with React, TypeScript, TanStack Router, Ant Design, and Tiptap.

Projects

URL Shortener

TypeScript, TSOA, TypeORM, PostgreSQL, Redis, Docker

- Built a URL shortening service with instant redirects, optional accounts, QR code generation, click tracking, and a management dashboard.
- Used Redis caching for fast redirects while storing persistent link data in PostgreSQL.

Full-Stack Authentication System

Next.js, TypeScript, Prisma, PostgreSQL, SendGrid

- Built authentication with Google/GitHub OAuth, JWT access and refresh token rotation, and TOTP-based two-factor authentication.
- Added transactional email flows, RBAC, rate limiting, and Zod validation.

RoomFinder

Next.js, Node.js, MongoDB, Clerk, Cloudinary

- Built and deployed a room rental platform for the Nepal market with separate landlord and tenant workflows.
- Implemented authentication, RBAC, search, filtering, pagination, wishlists, booking availability, and image uploads.

Crop Disease Detection

CNN, FastAPI, Python, MERN

- Built the full-stack side of a crop disease detection platform powered by a CNN model that analyzes crop images.
- Implemented Node.js/Express APIs, MongoDB persistence, JWT auth, image uploads, and bilingual advice.

Gemini AI Chatbot

React, Node.js, Express.js, Google Gemini API

- Built a full-stack chatbot connecting a React frontend to Google Gemini through a Node.js/Express backend.
- Handled AI requests server-side and rendered markdown responses for a conversational interface.

Education

Bachelor of Information Technology, Bhaktapur Multiple Campus

Expected 2027
