Summary

Full-Stack Developer with hands-on experience building web applications and contributing to a production SaaS platform during a three-month internship. I work across the frontend, backend, and database layers and enjoy turning ideas into complete, usable products. My experience includes Next.js, React, Node.js, Python, PostgreSQL, MongoDB, Redis, REST APIs, authentication, and real-time systems.

I am also interested in machine learning and AI. I have worked on ML based projects integrations turning them into a full-stack application. I am currently strengthening my foundations in NumPy, Pandas, data analysis, visualization, and classical machine learning. I am comfortable working with Linux, Docker, Git, and CI/CD.

Technical Skills

Languages: TypeScript, JavaScript, Python, PHP

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3, TanStack Router

Backend: Node.js, Express.js, FastAPI, TSOA, REST APIs, MVC Architecture

AI / LLM: Google Gemini API, LLM Integration

Machine Learning: NumPy, Pandas, Matplotlib, Seaborn, scikit-learn, Regression, Classification, Model Evaluation

Databases: PostgreSQL, MongoDB, MySQL, Prisma, TypeORM

Systems & DevOps: Linux, Docker, CI/CD, Redis, Redis Pub/Sub, Socket.IO, Git, GitHub

Authentication & Security: Clerk, OAuth 2.0, JWT, JWT Rotation, TOTP 2FA, RBAC, Zod

Experience

Full-Stack Developer Intern

3 Months

Stradmont Solutions

Nepal

- Worked on Builderbase, a SaaS platform, across backend services, database models, REST APIs, and React/TypeScript dashboard features.
- Contributed to user, authentication, rank, organization, CRM, task, goal, shop, and licensing modules using Node.js, TypeORM, and PostgreSQL.
- Implemented role-based access control and organization hierarchy using rank relationships and closure-table based tree structures.
- Built a real-time notification flow using the Outbox Pattern, Redis Pub/Sub, and Socket.IO for live notifications, badge updates, and toast alerts.
- Built reusable frontend components and dashboard features with React, TypeScript, TanStack Router, Ant Design, and Tiptap.
- Worked with Git-based development, Linux, Docker, and CI/CD-oriented deployment workflows.

Selected Projects

Gemini AI Chatbot

React, Node.js, Express.js, Google Gemini API

- Built a full-stack chatbot that connects a React frontend to the Google Gemini API through a Node.js/Express backend.
- Handled AI requests on the server and rendered markdown responses for a simple conversational interface.

RoomFinder

Next.js, Node.js, MongoDB, Clerk, Cloudinary

- Built and deployed a room rental platform for the Nepal market with separate landlord and tenant workflows.
- Implemented Clerk authentication and role-based access control for listing, booking, and account features.
- Added debounced search, filtering, pagination, wishlist functionality, booking availability tracking, and Cloudinary image uploads.

Crop Disease Detection

CNN, FastAPI, Python, MERN Stack

- Worked on the full-stack side of a crop disease detection platform that uses a CNN model to analyse crop images.
- Built Node.js/Express APIs and MongoDB persistence, along with JWT authentication and image upload handling.
- Added bilingual advice based on the model prediction so users could understand the result more easily.

URL Shortener

TypeScript, TSOA, TypeORM, PostgreSQL, Redis

- Built a URL shortening service with instant redirects, optional user accounts, and a dashboard for managing saved links.
- Added QR code generation with PNG download and click tracking for individual links.
- Used Redis caching to speed up URL redirects while storing persistent link data in PostgreSQL.
- Structured the backend with TSOA controllers, a service layer, and TypeORM database operations.

Full-Stack Authentication System

Next.js, TypeScript, Prisma, PostgreSQL, SendGrid

- Built an authentication system with Google/GitHub OAuth, JWT access and refresh token rotation, and TOTP-based two-factor authentication using Google Authenticator.
- Integrated SendGrid for transactional email flows and account-related notifications.
- Added role-based access control, request rate limiting, and Zod validation across authentication and authorization flows.

Education

Bachelor of Information Technology

Bhaktapur Multiple Campus

Expected 2027
